Formatting Instructions

In order to successfully upload Surplus Line policy information to the Alabama Department of Insurance Surplus Line System, the file must be in a "comma-delimited format". This means that all data elements on each line must be separated from each other by a comma. The file must also have a .txt (text) or .csv (comma-separated value) extension (for example, Brokerlisting.txt or Brokerlisting.csv). As you prepare your .txt or .csv file, the commas separating the data elements may not be visible if you view your data in a spreadsheet format. However, if you review your file in a text editor (such as Notepad), the commas will display. Both of these file types can be created directly from a Microsoft Excel spreadsheet.

If your accounting software is other than Microsoft Excel (i.e., PeachTree, QuickBooks, Great Plains or Platinum), but will create a .csv or .txt file, that is acceptable. Another possibility is to "export" or "cut and paste" Surplus Lines policy data to Excel and use that to create a .csv or .txt file.

Required fields and file formatting for uploading Surplus Line Unauthorized Insurer's Policy data to the Surplus Line System. **Do not use commas in any of the fields (including money fields):**
